                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the genomic region containing the coding region for the human lipolysis stimulated receptor (LSR). The novel LSR binds lipoproteins in presence of free fatty acids (FPA) and binds cytokines in absence of FPA. The nucleic acid and its fragments are used as production of recombinant LSR; for detecting allelic variants, for production of recombinant LSR; for detecting allelic variants, mutations, deletions, loss of heterozygosity and genetic abnormalities in the gene LSR, recombinant cells and transgenic animals are used to screen for chemical interactions with LSR, also to study expression and activity of LSR and its interactions. The chemicals, and leptin, are used to modulate the number of LSR in a cell, its recycling rate and/or specificity of receptor activity, particularly for reducing the level of leptin, lipoproteins, chylomicrons and/or triglycerides. The chemicals are thus useful for treating eating disorders, particularly obesity (and relabelism.) and diabetes) or anorexia, also disease associated with abnormal cytokine metabolism.
                                                                                                                                                                                                                                                                                                                       Human: lipolysis stimulated receptor; LSR; lipoprotein; free fatty acid; cytokine; probe; primer; amplification; hybridisation; detection; leptin; allele; variant; mutation; deletion; loss of heterozygosity; chylomicron; transgenic animal; gene expression; triglyceride; eating disorder; obesity; atheromatosis; atherosclerosis; hypertension; diabetes;

The present invention describes an isolated, putilied or recombination of polynucleotide (PN) (I) comprising a configuous span of 8 to 50 nucleotides, where the span includes a G713 or chromosome 13431-433 as a G713 gene expression inhibitor. (I) can be used genotyping to estimate the frequency of an allele of a G713 or chromosome 13431-433 celated biallelic marker in a population, and of a haplotype for a set of biallelic marker in a population, and of a haplotype for a set of biallelic markers in a population, and of a haplotype for a set of biallelic markers in a population, and of a haplotype for a set of biallelic markers in a population, and of a haplotype for a set of detecting an association between a genotype and a trait. The frequency is used for detecting an association between a genotype and a trait being schizophrenia. The genotype is used to determine whether an individual is at risk of developing schizophrenia. (I) can also be used as a medicament against several disorders preferably brain, psychiatric disorders such as schizophrenia and bipolar disorder. Early identification of risk of developing schizophrenia is possible, which would enable early and/or prophylactic treatment. AAA55964 to AAA55966 represent human G713 genomic DNA sequences; AAA55967 encodes the human C713 genomic DNA sequences; AAA55967, and AAA56031 and AAA56032 represent PCR primers used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              present invention describes an isolated, purified or recombinant

```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

Web site: http://genome.wustl.edu/gsc Contact: sapiens@watson.wustl.edu

code: WUGSC

Center

Center project name: H_RG269P13

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by This sequence was finished as follows unless otherwise noted: restriction digest.

MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/plk/GTB/CHR7, send mailto:egreen@hgri.nih.gov/ or see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

Clone CTA-269P13 is from a release of the human BAC library CTB-HS-A. The library contains cloned DNA from human sperm. See Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). The clone is available from Research Genetics, Inc. (http://www.resgen.com) VECTOR: pBeloBAC11

chloramphenicol Selection:

The clone sequenced to the left is RP4-754G14; the clone sequenced to the right is RP11-396K3. Actual start of this clone is at base position 1 of CTA-269P13; actual end is at base position 124526 of CTA-269P13. NEIGHBORING SEQUENCE INFORMATION:

The clone CTA-269P13 may contain a transposon in the growth of the clone, which is not part of the submitted sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 entire insert of this
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          misc_feature
                               The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov , or see http://genome.wustl.edu/gsc
                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence CTA-350L10 from base position 222330 to 222775 is a GA rich region. The sequence is not exact but it is believed to be the best representation of this region. The region was sized by PCR from clone DNA at 650 bp. The region corresponds to restriction digest hindili: band size 7685 in silico and 7756 real.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               EST AI566941 (NID:g4525393) tn25b07.x1"
                                                                                                                                                                                                                            Clone CTA-350L10 is from a release of the human BAC library CTB-HS-A. The library contains cloned DNA from human sperm. See: Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J. Kim et al., Genomics 34:213-8 (1996). The clone is available from Research Genetics, Inc. (http://www.resgen.com).

                                                                                                                                          NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 184558;
